Overview

What is a wireframe?

Wireframes are part of the information architecture, defining page structures for individual web pages. The wireframe's main focus is on the application's structure, information design and interaction design.

A wireframe is an abstract diagram illustrating the structural aspects of a page or page template. The purpose and use of each section within a page or the overall rationale for the page structure may complement the wireframe. A wireframe defines the types of information (content elements) and services (including navigation) generally required for each page-type. It does not contain the actual copy or visual design elements, keeping the focus on information, interaction, and navigation.

The actual copy, including links and image file names, will be stored in the master content document. Colours, stylesheets, shapes, aesthetics, and other visual design elements are addressed in a design style guide. For more detail on how the user navigates through site, refer to the user flow document. Also refer to the site map to see a hierarchical illustration of all pages on the site.

How should this document be used?

When updating web sites, this document will help the Channel, Design, and UXA teams determine:the structure (required elements, navigation, etc.) of a new page that is added to the sites, and / or how new pages, functionality, and/or page elements affect the overall information structure of existing page types (and the extent, if any, of changes that should be made to related page-types).

Save time organizing and publishing your community's ideas

Start saving time with Loorp

Try it for yourself. Help your community collect, organize, and publish with just a few clicks.

Try it for free!

What is Loorp?

Loorp is a collaborative publishing platform that helps you collect, organize, and make accessible your community's ideas.

Is Loorp for me?

If you collect, organize, or publish information from multiple sources, Loorp was built for you.

Why should I use Loorp?

Loorp will help you save time organizing and publishing your community's ideas. Freeing you up to focus on making a difference.

How does Loorp work?

Community:
Underlying everything at Loorp is your community. Loorp provides you collaborative tool–set allowing you to work with your friends, colleagues and peers to make a difference.

How Loorp enables Community collaboration »

Ideas:
The Community's Ideas are the building blocks of Loorp. Each idea can be shaped, discussed, and promoted. The best of the ideas can be used to quickly publish pages.

How Ideas are used by Loorp »

Feed:
Loorp's Feed system provides fast and easy tools to collect new ideas and information and share them with the community, from anywhere, at anytime.

How the Feed makes it easy to collect and organize ideas »

Publishing:
Loorp uses a simple drag and drop page creation system making it easy to combine widgets to build whatever you need.

How Loorp's publishing tools save you time »

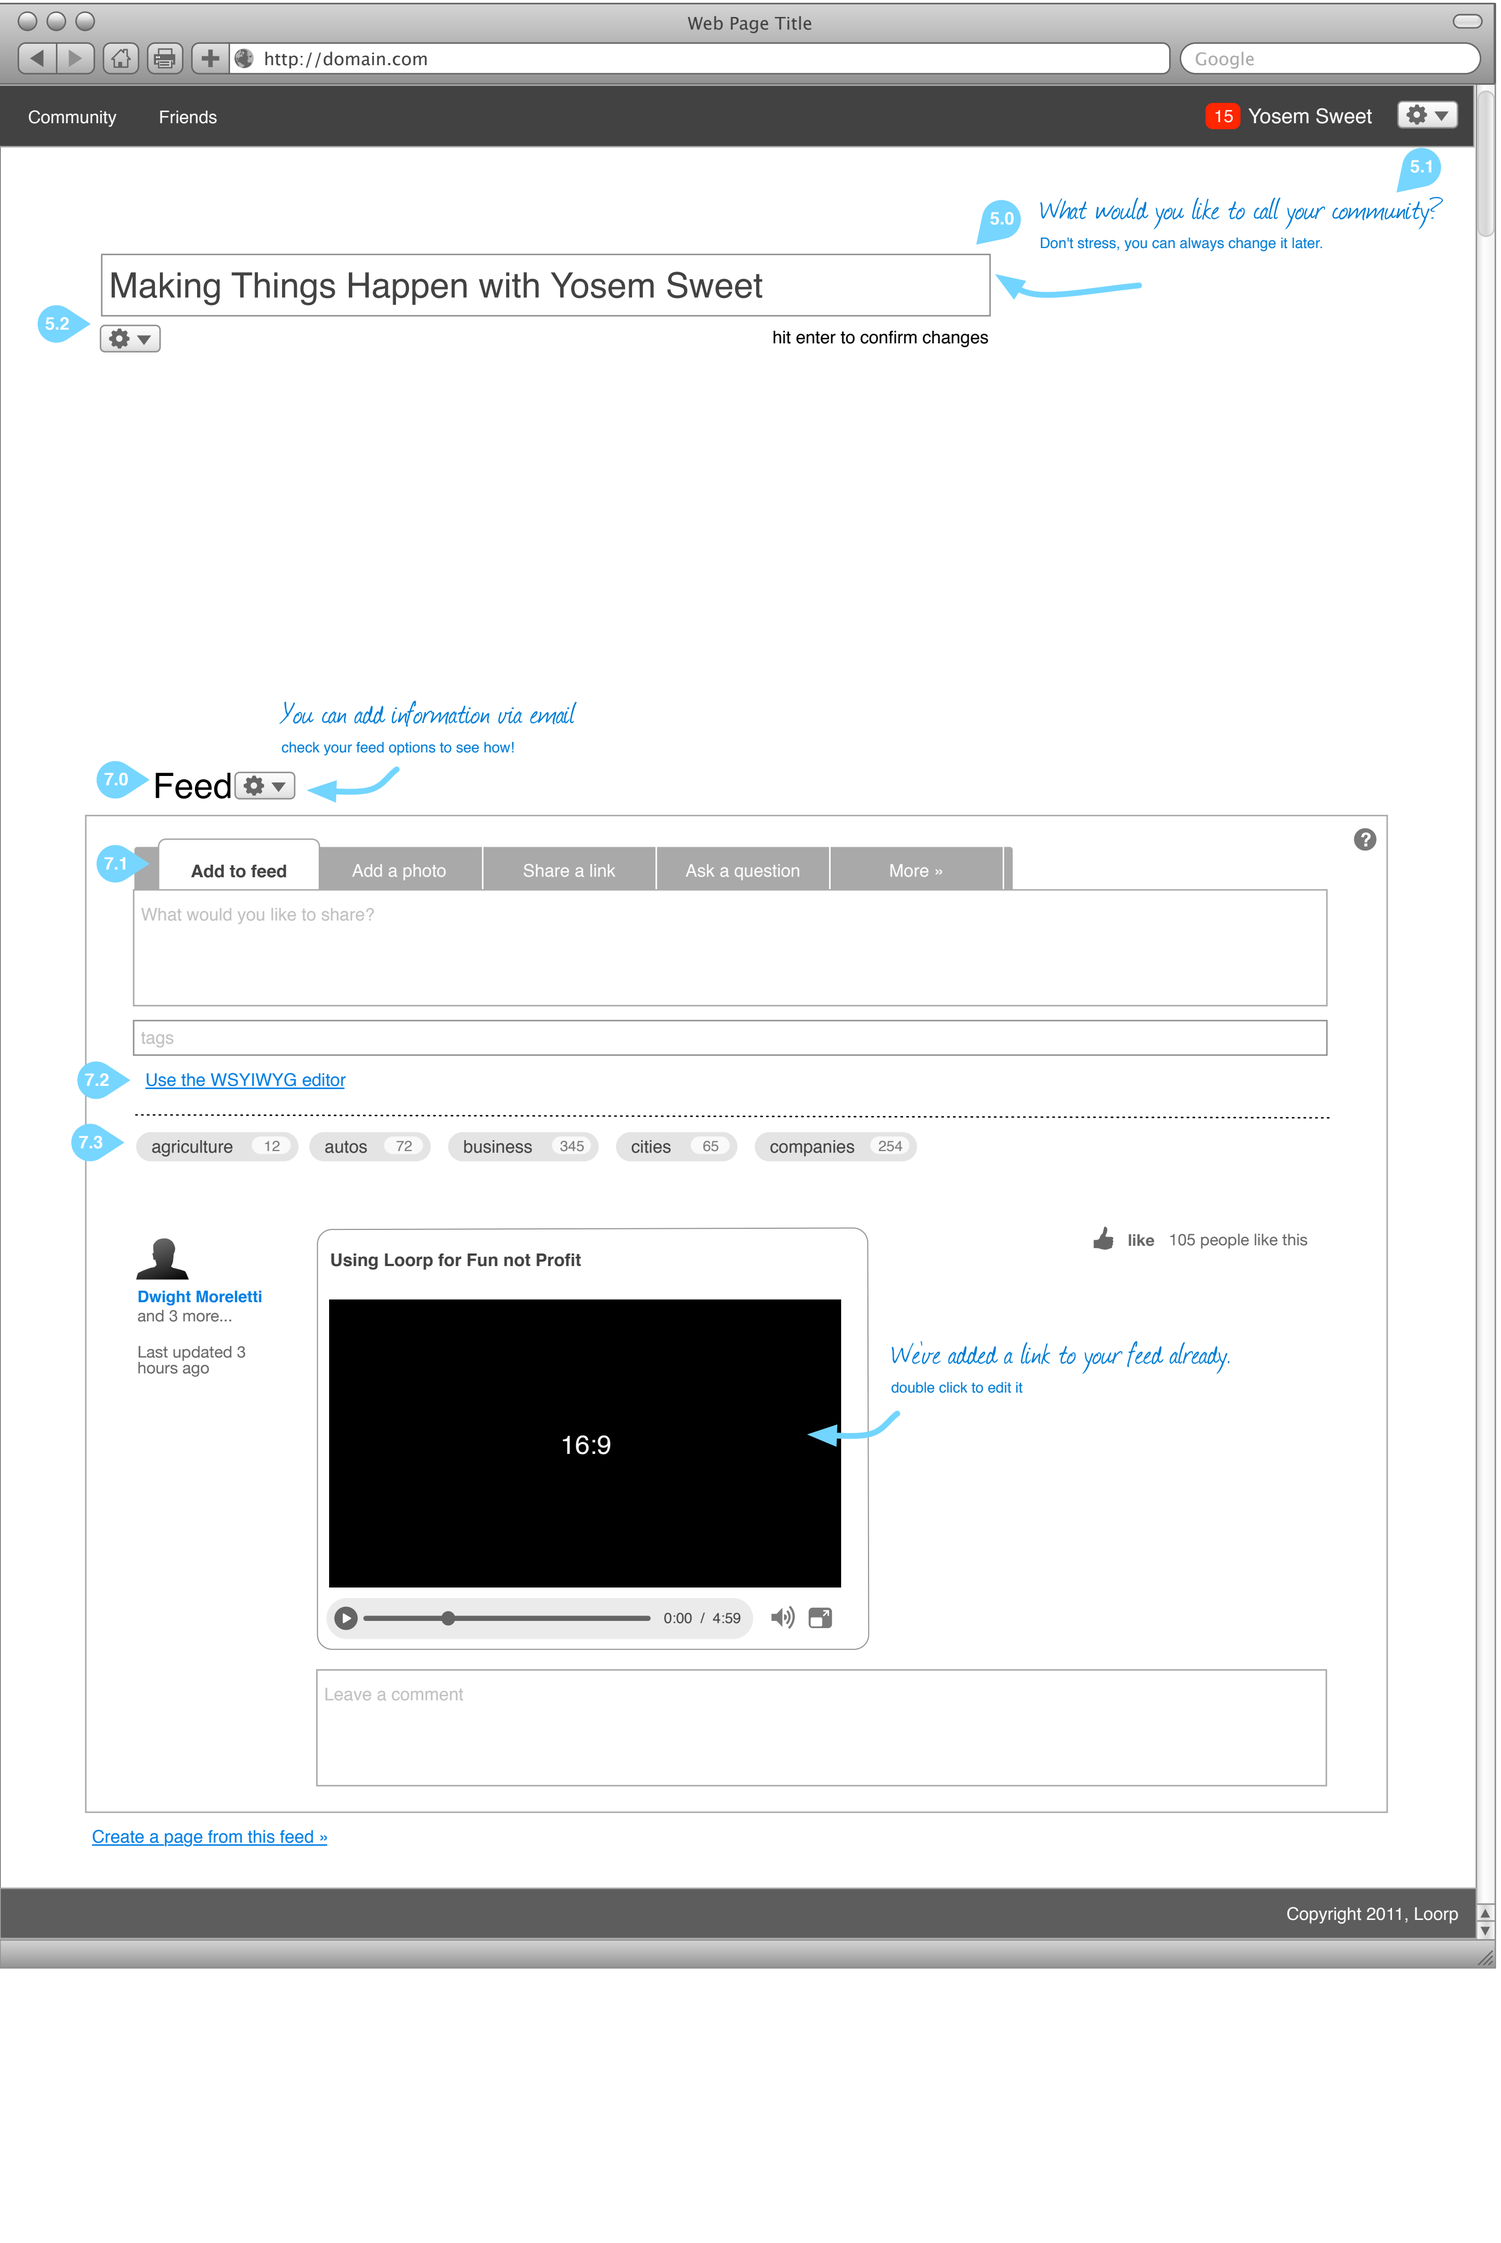
4.1 Interest links
them



5.0 Community Name - default to something fun-ish
When first creating a community this should have focus, be prepopulated with the default, and be in edit mode

5.1 When first creating a community this CTA indicator should be shown until the user hits enter

5.2 this instructional text should be shown whenever the user is editing the community name

5.3 this call to action shown when user isn't editing

6.0 Pages area provides access to all pages in the community. The pages area should be large enough to imply space and room for multiple pages.

6.1 Pages can be organized into groups. Each group indicated the number of pages in the group. Pages can belong to multiple groups. Clicking on a group filters the pages shown in the pages area. We always show a union of all selected groups. Pages can be added to groups via drag and drop.

6.2 A new group can be added by clicking the + button, typing a name, and then hitting enter. Hitting esc will cancel group creation.

6.3 Pages are shown visually with a title. Hover provides access to tools for editing or viewing a page

6.4 When first creating a community, this CTA indicator will be shown until user views page.

6.5 Clicking new page takes user to new page form.

6.6 Within pages option the owners can manage page groups.

6.7 As new pages are created they will show up here via ajax. The area will grow according to page count.

6.8 Dropping a widget onto a page will add it to the page at the bottom.
